

The RAPD

Right Angle Positioning Device
For Dental X-ray Film and PSP Plates

For accurate x-rays nothing beats the RAPD system! Our RAPD is the original color coded film positioner. RAPD bite blocks feature rounded corners and are flexible for easy loading and unloading. And our tabs ensure your film, (or psp plates) won't fall out during x-ray's. Our bite blocks and aiming rings are color-coded so assembling the correct positioner is always quick and easy!

The RAPD is a right angle positioning device for intraoral dental x-ray film that can be used for anterior, posterior and bite-wing dental x-ray exams. The RAPD can be used with any brand and size (sizes 3, 2, 1 and 0) of dental film. The right angle positioning system assures correct film/cone alignment and prevents "cone cutting".

The RAPD's color coding makes assembly of the instruments error proof, and RAPD's are autoclavable for over 10 uses. Note that you cannot chemiclave or dry heat sterilize or use the autoclave drying cycle. All RAPD components are interchangeable with Rinn's XCP™ System.

As listed below, The RAPD is available as whole kits and replacement parts. The tow large kits come with instructions.
